THE GAME

Trade like a pro. Risk like a beginner.

Every quote you see is a real market quote. Every dividend hits on the real ex-date. Every options Greek is the one the market is actually pricing. The only thing that isn't real is the money.

LONG

Buy. Hold.

Open positions in any US-listed stock or ETF. Average down or up. Watch unrealized P&L tick by tick. The day P&L pill stays glued to your dashboard.

SHORT

Bet against.

Short any optionable ticker. Track your liability in real time. When you cover, the realized P&L lands cleanly in your cash balance and your trade history.

OPTIONS

Full chains.

Calls and puts across every available expiry. Live bid/ask, IV, delta, gamma, theta, vega. A position-detail screen tracks unrealized P&L on the contract every refresh.

Dividends are real, too.

Hold a dividend-paying name through the ex-date and the payment hits your cash balance — automatically, on the right day, for the right amount, and recorded in your trade history.

INSIDE THE APP

Home, Market, Portfolio, News, Ranks, Stats. Each tab does one job and does it without burying you in a settings tree.

MARKET

NEWS

Curated US-market headlines with a clean in-app reader view.

RANKS

Global leaderboard, ranked by total portfolio value. Your row pinned.

STATS
